

Shaded Pole Motor

The AC single phased design of CCL shaded pole motors operate silently with high stability, the non-brush configuration allows for long life and most of them are compatible with variable speed controls. In addition to general air handling application, our shaded pole motors are also designed for oven (as convention fan and cooling fan) and refrigerator (as condenser fan and evaporator fan), its operating environment temperature can be as high as 120°C (248 °F) when used in oven to as low as -30°C (-86 °F) when used in refrigerator.
